Dear Hinada,

I am happy to provide a review and testimonial for the Plantare software that we purchased for our office.

After installing the trial version to work with our AutoCad Map 5 system we were able to quickly learn the basic operations in a couple of hours and create concept drawings that would have taken a significant time with our old methods.

Our office works on large areas of landscaping and forestry the software provides a major saving in production time in our office, often reducing drawing time by up to 40%. This of course has a great impact on how we spend the project fee.

The program was selected for use in our office to create better interface between design and production drawings, and greater accuracy in terms of tendering projects which often exceed 400 acres in area.

Major features such as the photographic library and block management systems greatly improve plant recognition and selection for our office. Since we have a limited planting palette in Alberta due to the short growing season we were pleased to see that the planting menus for the northern hemisphere were comprehensive for our needs.

We found the software support to be exceptional given the time difference and greatly appreciated the help and information setting up the system for our office.

We look forward to seeing new modules added for the software and will be looking to add new licenses in the near future.

Regards,

Mark Crisp, MRAIC
